Appointment Booking and Business Approval Workflow

Diagram Information

This diagram represents the end-to-end appointment booking process. A customer authenticates, browses approved businesses, selects a service and time, and passes availability checks based on resource type. Available appointments are marked as pending, added to Google Calendar as yellow events, and sent to a business operator for acceptance or rejection. The appointment is then confirmed with a green event or cancelled with a red event, and its state is locked.

Appointment Booking and Approval SOP

- Start the appointment booking process.
- Authenticate the customer through the Authentication Service.
 - 3.1 If the account is inactive, return a 403 Forbidden response and end the process.
 - 3.2 If the account is active, allow the customer to continue.
- Allow the customer to browse the Discovery Gallery.
- Scope the customer's search to approved businesses using the Approved Business Directory.
- Have the customer select a service, date, time, and optional resource.
- Calculate the appointment end date and time using the Availability Engine.
- Identify the selected resource type.
 - 8.1 If the resource type is Human Staff, check the staff schedule and across overlap count.
 - 8.2 If the resource type is Physical Space, check pending and confirmed overlaps against the available capacity.
- Determine whether the requested resource is available.
 - 9.1 If the resource is unavailable, return an overlap error and end the process.
 - 9.2 If the resource is available, continue booking.
- Insert the appointment and its status-specific one-to-one details into the Appointment Database.
 11. Set the appointment status to Pending.
 12. Push a yellow event to Google Calendar.
 13. Open an action-required time in the Action Required Dashboard.
 14. Have the business operator review the pending appointment.
 15. Determine the business operator's action.
 - 15.1 If the operator accepts, transition the appointment status to Confirmed.
 - 15.2 Push a green event to Google Calendar.
 - 15.3 If the operator rejects, transition the appointment status to Cancelled.
 - 15.4 Push a red event to Google Calendar.
 16. Lock the appointment state in the Appointment Database.
 17. End the workflow.
